SUMMARY

Senior Backend Engineer with 7+ years of experience building scalable backend services, APIs, and distributed systems using Python. Experienced in designing microservice architectures, asynchronous processing workflows, and cloud-native applications with Django, FastAPI, AWS, Kafka, Celery, and Databricks. Passionate about building reliable, maintainable, and high-performance systems that solve complex business problems at scale.

EXPERIENCE

Senior Backend Engineer at Mercedes Benz (Infoser N.T.) - (2026)

- Optimized Databricks ETL pipelines for metadata ingestion and reporting, improving pipeline reliability for data infrastructure.
- Designed Celery-based asynchronous workflows for distributed metadata entity processing.
- Extended a FastAPI REST API to integrate with Open Metadata, improving internal data governance.

Senior Backend Engineer at Mapfre (Softtek) - (2024-2026)

- Designed and built Django microservices from scratch for a home insurance platform, enabling automated lead generation via third-party API integration; OAuth2 authorization, Docker deployment, unit/integration testing.
- Contributed to a car insurance system using Django microservices, Apache Kafka for event-driven monitoring and Celery for async task processing; owned deployment and test automation.

Senior Backend Engineer at Santander (Softtek) - (2023-2024)

- Built and maintained Flask RESTful APIs managing corporate entity data (organizations, teams, hierarchies) for one of Europe's largest banks
- Ensured code quality through pytest unit/integration testing; delivered via GitLab CI/CD pipelines in an Agile/Scrum environment.

Python Backend Developer at Technest - (2021-2023)

- Contributed to Greco, a campaign analytics dashboard tracking KPIs (CTR, CPM) for gambling marketing operations; built Python REST APIs for authentication, graph generation and Elasticsearch ingestion
- Helped architect Affinity, a cloud-native scalable platform on AWS using Glue Jobs (Apache Spark), Redshift, QuickSight and S3; Django as backend framework
- ETL process for automatic extraction of gitlab metrics.
- Dashboards API: FastAPI Python project that returns cryptocurrency transaction data to the final user.

Fullstack Developer at Quantec Data Center SL (2019-2021)

- EnergyProject: real-time monitoring system for wind turbine operational variables using Python.
- GreenAlert: AI-powered forest fire early warning system integrating geospatial data and machine learning models

Software Developer at GRVC, Universidad de Sevilla. (2018-2019)

- Aerial robotics: ORB-SLAM algorithm for drone relocation with ROS OS.
- Sensorial fusion: ZED camera and GPS telemetry information.

STUDIES

Master's degree in Big Data & Business Analytics (2019-2021)

Master's degree in Electronics, Automatics and Robotics Engineering (2017-2019)

Bachelor's degree in Industrial Engineering (2012-2017)
